

## 12th District Banking Profile

## **Overview**

As banks in the 12th District continue to recover from the financial crisis, we take a look at both the crisis and recovery periods from a long-term perspective. Profitability at District banks rose above the national average prior to the crisis, followed by operating losses and net loan charge-offs that were far more severe. Through 2012, District earnings and loan quality remained moderately weaker than the nation. Loans grew steadily relative to overall balance sheets, peaking in 2008 then contracting through the financial crisis deleveraging period. Over time, real estate credits became the predominant loan type, reaching 77% of District bank loans on average. While exposure to RE cycles is greater, average equity/assets ratios are up sharply from the '70s, despite temporarily dipping during the financial crisis. Nationwide, just over 6,000 commercial banks are in operation, down from nearly 31,000 in 1921. Several failure waves, industry mergers, and loosening of branching laws fed the long-term trend.

Based on Commercial Banks, excluding De Novo banks; trimmed means
